

What has happened to competition or free enterprise. I bought an XM radio to enjoy all the features and programing it has to offer. Now the NAB is trying to stop them from broadcasting the weather and traffic. For comparisons the television Weather Channel is in competition with local and national weather forecast. What is wrong with variety? As for traffic reports when you need to know it is not available all the time on any local station. They only give local traffic at certain times. We have freedom of protection from the First Amendment. Lets keep away from tampering with XM and let hem have their rights.
